

**CSE 214**  
**Online on Creational Pattern**  
**Time: 30 minutes**

You are developing a system to build meal plans for a restaurant. There are two kinds of meals available for now. Each meal has a starter, main dish and a dessert. A Bengali meal contains vegetable, chicken curry and sweet curd. A Chinese meal contains soup, Peking Duck and Pudding.

After the user chooses his preferred meal, you have to create the meal with all three courses using appropriate design pattern. **For this task, you don't need to create classes for each of the courses and can use strings for demonstrating your design. You must create a class that represents the final meal with all its courses.**
